

We know that a safe and nurturing environment is of the uttermost importance, along with attentive and caring care givers. Our Greatest Gifts will provide a “home away from home” environment where the children are encouraged to grow, learn, and explore through play. Care givers will help each child meet goals based on each child’s individual age and stage of development.

Care givers will focus on four main areas of your child’s development

Physical development: Toddlers love to move. Jumping, dancing, climbing and crawling. Teachers will provide activities that will spark the interest of the children and help improve coordination by scribbling and stacking toys.

Social and emotional development: Teachers will model behaviors that will encourage sharing, and being polite to their peers because toddlers learn by example. The teachers will encourage social and self help skills while giving the children the opportunity to express their feelings in a healthy way.

Cognitive (thinking) development: Supports the mental processes needed to use language, memory, thinking and reasoning. During the course of the day, the children will explore the classroom to do activities such as sorting objects, fixing puzzles, building blocks, and taking things apart and fitting them back together.

Language development: Teachers spend a lot of time conversing with children so that they will learn how words should sound and how to have a conversation with their peers. They will read books with simple words, sing songs, say rhymes, finger play, listen to music and do things in a repetitive manner to make learning easier.

Toddlers learn best in a safe, loving place where they can explore, in their own way.. Some of the following are ways that your child will learn.

1. **Through relationships with their care giver.** Teachers help your child feel secure and important. They will create strong, and positive bonds with your toddler that will help them gain confidence to explore and learn.
2. **Through hands on play.** Toddlers learn best when they can see, hear, taste, touch, and smell objects safely. Through exploration, they start to see how the world around them works and how to solve problems.
3. **Exploring the world around them.** Giving them a chance to explore the room and outdoors every day if possible. Play is important way your toddler explores material, test ideas, and starts figuring out why something happens.
4. **With support from their teacher.** Teachers will ask questions to help children think about what they are doing, acknowledge the children’s efforts, and offer suggestions that will help the children try new things.
